

Task 1

Task 2

LGA1151 → Intel Core i7-9700K

AM4 → AMD Ryzen 5 3600

LGA1200 → Intel Core i5-10400

Task 3

The CPU is the brain of the computer that executes instructions and processes data. The chipset manages communication between the CPU and other components such as RAM, storage, USB and PCIe devices. When we open Spotify, the CPU processes the instructions needed to run the app, while the chipset helps coordinate communication between the CPU, RAM, storage and other devices. Together, they allow Spotify to load and play music smoothly.

Task 4
